| 36" X 80' FULL LIGHT DOOR | \$249.00 | 10' SLIDING DOOR KIT | \$638.00 |

Understanding the NRCS High Tunnel Program

The USDA's National Resource Conservation Service offers grants to agricultural producers who use high tunnels to grow fruits and vegetables. This program encourages growers to produce sustainable agricultural products and provide citizens with quality, locally grown food. In order to receive funding agricultural producers apply for grants through the NRCS, provided they meet certain requirements. <https://www.nrcs.usda.gov/conservation-basics/conservation-by-state/alaska>

Both established farmers and beginning producers can receive grants for high tunnels up to 2,187 square feet. The purpose of the high tunnel must be to extend the growing season, and improve plant, soil, and water quality. NRCS may also provide funding for supporting activities such as irrigation, pest control, crop rotation and more.

To apply you must be an agricultural producer that has cultivated or sold at least \$1,000 worth of products, or you must be able to show how you plan to do so once in operation. The land you plan to grow on must already be in agricultural production or cultivated, and you must meet all NRCS standards prior to installation.

Rimol High Tunnels are approved by the NRCS as qualifying EQIP structures. If you are interested in participating in this program, please contact Kenai Feed so we can guide you through the process of purchasing and installing a high tunnel.
